

PRACTICAL 9

Applet, Frames and Event Handling-I

1. Develop an applet program which explains all life cycle methods
2. Write a program which creates a simple moving banner using applet
3. Write an applet which takes name and basic salary as applet parameters (using param tag) and display employee name and gross salary on applet(Calculate gross salary using following equations)
If $\text{basic} < 10000$ then $\text{DA} = 15\%$ of basic salary else 10% of basic salary.
4. Write a program to create following frame which takes two number from user and when Add button is pressed it will display the sum on to frame. Whenever Clear button is pressed both TextField must be cleared

Num1	<input type="text"/>
Num2	<input type="text"/>
Add	Clear

5. Write a program to demonstrate the use of `getCodeBase()` and `getDocumentBase()`
